

## epro CARE TIPS FOR STAINLESS STEEL PRODUCTS

---

You have chosen a high quality product made from stainless steel. **Stainless does not mean maintenance-free though!**

It is possible to get corrosion phenomena due to environmental influences (e. g. fumes, exhaust gases, salt content of the air, sweat, etc.) and soiling. A rust film can lay on the material. This film can corrode into the material if not washed away soon.

### Right care

---

- > always wipe according to the brush direction
- > a soft towel made of leather, fleece or microfiber is ideal
- > uneven surfaces like soft brushes made from nylon

#### Use if needed

- > dish soap
- > cleaner/polish for stainless steel
- > water with a drop of vinegar or lemon juice
- > chloride-free all-purpose cleaner/ window cleaner
- > organic solvent

**This rust film and its consequential damages are no reason for complaint!**

Maintenance on a regular basis helps to prevent from this damage. It preserves the polish and increases the product's lifetime. Bloom and incrustations can easily be removed. The cleaning takes place after usage or soiling – outdoors according to the environmental influences. We recommend to maintain our products at least twice a month in any case.

### Wrong care

---

- > never wipe in circles

#### Do not use

- > steel wool/brush
- > scraping sponges/brushes
- > scrubbing cleanser
- > silver cleaning (cloth)
- > cement residue remover
- > cleanser with muriatic acid
- > chlorine bleach or other chlorine containing cleansers (risk of corrosion!)
